DESIGN

The color range of our PEARL quality was matched to modern architectural colors in cooperation with color psychologists. Harmonious nuances in trendy colors add the perfect touch. METAL – available in four colors, silver, gold, nickel and platinum coated with brilliant metal particles – an absolute visual highlight for any façade. SPACE is Sattler's quality with an aluminum coating on the outer side – in proper style through and through.

ENVIRONMENT

PVC free: This is our focus during the development of the Twilight qualities. No plasticizers leaking out, odorless and therefore suitable to be used without hesitation in both, indoor and outdoor areas. A completely new path is being forged: the coating of our Twilight qualities is not only biostatic but also prevents microorganisms from attaching to the surface. A new patented ecological solution exclusively used by Sattler!

DURABILITY

Due to the excellent light and weather fastness of all our qualities and if used properly, you can enjoy our Twilight fabrics for many years. Like all Sattler's high quality articles, Twilight products also offer a 5-year-guarantee against excessive loss of protective capability of sun-privacy and glare protection fabrics. For more details, please read Sattler's Twilight guarantee conditions.

SAVE ENERGY

All qualities of the Twilight collection have been tested and comply with norm DIN EN 14501 regarding their performance as summer heat protection fabrics used in outdoor areas with double glaze and heat protection with $U = 1.2$ and $g = 0.59$. The pictograms show the degree up to which each of the qualities is suitable for this use: 0 = no protection from overheating; 4 = excellent protection from overheating ($g_{tot} < 0.1$).

SATTLER 

DAYLIGHT USE AND GLARE PROTECTION

All Twilight qualities have also been tested and comply with norm DIN EN 14501 regarding their suitability as glare protection fabrics. The values are indicated through a pictogram in which the values corresponding to each of the designs is shown: 0 = no glare protection; 4 = excellent glare protection.

But good glare protection is not the only important feature for the wellbeing of people: enjoying enough daylight in indoor spaces is also a relevant factor for health. Twilight fabrics avoid glare while allowing at the same time daylight to pass into the rooms – an optimal combination for all users. Sunlight means life and plays a decisive role in our Twilight collection – it is all about health and wellbeing.

Typical daylight spectrum. The Twilight fabrics do not act as a spectrum filter. They let the complete color spectrum enter the room increasing this way the well-being inside!

VISIBILITY

Who wants the whole world outside to suddenly disappear when rolling down the sun protection blinds?

Twilight fabrics are ideal to maintain outward vision. To learn more about the compliance with norm DIN EN 14501, please read the specifications for each of the qualities: 0 = no visibility to the exterior; 4 = excellent visibility to the exterior.

PRIVACY PROTECTION AT NIGHT

When lights are on inside during the evening hours, privacy protection should prevent people outside to see through it. Learn more about the values according to norm DIN EN 14501 in the specifications for each of the qualities: 0 = no privacy protection at night; 4 = excellent privacy protection at night.

Care and cleaning instructions for Twilight fabrics

Never leave the screens rolled up whilst wet or damp for a longer period of time. Roll out the screens as soon as possible and let them dry.

Remove fallen leaves or insect droppings immediately (risk of microbial infestation or punctual damages of the privacy protection and aluminized coating).

Dirt is best removed dry with a soft brush. Please be especially careful when brushing off the aluminized coating in order to avoid the aluminum layer to peel away due to pressure. Avoid strong rubbing of the fabric.

Remove stains with lukewarm water and a soft brush. Be especially careful with aluminized fabrics.

Do not use cleaning agents or detergent under any circumstance. Risk of detachment.

All brushes, sponges or clothes used should be soft and shall not have any rough surface in order to avoid damages to the screens.
